

# Construction Surveying

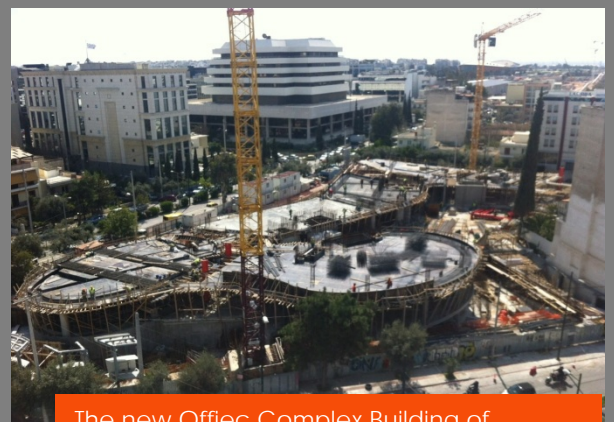

- ✓ We provide the manpower, the equipment and the precision to complete your project on time and on budget
- **Condition surveys**  
Present an accurate recording of the existing condition of a building or surrounding area.
- **Correlation Surveys**  
Assures that any underground structure do not obstruct or interface with proposed design.
- **Control Network Establishment**  
High accuracy network creation using the technique that meets the project's needs.
- **Setting Out**  
We align the position of the elements to be constructed by establishing works on site, ensuring the most complex designs can be built with confidence.
- **Construction Verification**  
We monitor and record the existence condition and timing of significant operation on the construction site through QC records in order to add value to the project.
- **Deformation & Structural monitoring (IPC monitoring)**  
By using high - end equipment software and methodologies systematic measurements to track the alteration in the shape of our element are performed so that to prevent structural failures caused by applied loads.
- **Laser Scanning**  
Where a high degree of analysis is required laser scanning techniques are applied in order to conduct geometric documentation.

## BENEFITS

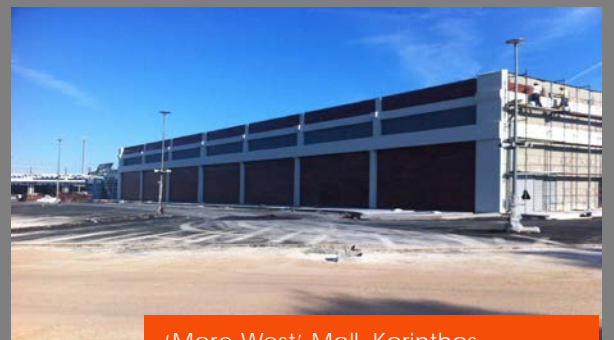

- Low mobilization time
- Surveying cost reduction
- Scheduling issues are avoided
- Special equipment provision

Stavros Niarchos Foundation Cultural Center, Athens

The new Office Complex Building of Anangel Shipping Company, Athens.
